# Drinking Water Quality and Compliance for Town of Delisle 2022 Annual Notice to Consumers

# Introduction

The Water Security Agency (WSA) requires that at least once each year waterworks owners provide notification to consumers of the quality of water produced and supplied as well as information on the performance of the waterworks in submitting samples as required by a Permit to Operate a Waterworks. The following is a summary of the Town of Delisle's water quality and sample submission compliance record for the January 1st, 2022 to December 31st, 2022 time period. This report was completed on July 11th, 2023. Readers should refer to the Agency's <u>Municipal Drinking Water Quality Monitoring Guidelines</u>, <u>November 2015</u>, <u>EPB 202</u> for more information on minimum sample submission requirements and the meaning of type of sample. Permit requirements for a specific waterworks may require more sampling than outlined in the Agency's monitoring guidelines. If consumers need more information on the nature and significance of specific water tests, for example, "what is the significance of Selenium in a water supply", more detailed information is available from: <a href="http://www.hc-sc.gc.ca/ewh-semt/pubs/water-eau/index\_e.html">http://www.hc-sc.gc.ca/ewh-semt/pubs/water-eau/index\_e.html</a>.

# Water Quality Standards

# **Bacteriological Quality**

Parameter/Location	Limit	Regular Samples Required	Regular Samples Submitted	# of Positive Regular Submitted (%)	
Total Coliform, E. coli and	0 Organisms/100 mL	52	52	0%	
Background Bacteria	Less than 200/100 mL				

#### Water Disinfection -

Chlorine Residual in Distribution System for Test Results Submitted with Bacteriological Samples							
	Minimum	Total Chlorine	Free Chlorine	# Tests	# Tests	# Adequate	
Parameter	Limit	<b>Residual Range</b>	<b>Residual Range</b>	Required	Submitted	Chlorine (%)	
Chlorine	0.1 mg/L free OR						
Residual	0.5 mg/L total	0.68 to 1.53 mg/l	0.6 to 1.12 mg/l	52	52	100%	

# Water Disinfection - Free Chlorine Residual for Water Entering Distribution System from Waterworks Records-From Water Treatment Plant Records

Parameter	Limit (mg/L)	Test Level Range	# Tests Performed	# Tests Not Meeting Requirements	
Free Chlorine Residual	at least 0.1	.52 to 1.16 mg/l	365	0	

A minimum of 0.1 milligrams per liter (mg/L) free chlorine residual is required for water entering the distribution system. Tests are normally performed on a daily basis by the waterworks operator and are to be recorded in operation records. This data includes the number of free chlorine residual tests performed, the overall range of free chlorine residual (highest and lowest recorded values) and the number of tests and percentage of results not meeting the minimum requirement of 0.1 mg/L free chlorine residual.

<u>Turbidity – From Water Treatment Plant Records</u>							
Parameter	Limit	Test Level	# Tests Not Meeting	Maximum	# Tests	# Tests	
		# Tests					
	(NTU)	Range	Requirements	Turbidity (NTU)	Required	Performed	

# Chemical - Health Category

All waterworks serving less than 5000 persons are required to submit water samples for WSA's Chemical Health category once every 2 years. The Chemical Health category includes analysis for arsenic, barium, boron, cadmium, chromium, fluoride, lead, nitrate, selenium and uranium.

The last sample for Chemical Health analysis was submitted on June 20<sup>th</sup>, 2022. Sample results indicated that the provincial drinking water quality standards were not exceeded.

Parameter	Limit MAC (mg/L)	Limit IMAC (mg/L)	Sample Result(s)	# Samples Exceeding Limit	
Arsenic	0.010		0.001	Nil	* Results expressed
Barium	1.0		0.013	Nil	as average values
Boron	5.0		0.20	Nil	for communities or
Cadmium	0.005		<0.00001	Nil	waterworks that
Chromium	0.05		<0.0005	Nil	fluoridate drinking
Fluoride (avg*)	1.5		0.27	Nil	water supplies or
Lead	0.01		0.0005	Nil	those with elevated
Nitrate (avg.*)	45.0		<0.04	Nil	concentrations of
Seleniuum	0.01		<0.0001	Nil	fluoride or nitrates.
Uranium	0.02		0.0023	Nil	

General Chemical						
Parameter	Aesthetic	Sample Result	ts # Samples	# Samples		
	Objectives * (mg/L)	(average)	Required	Submitted		
Alkalinity	500	302	1	1		
Bicarbonate	No Objective	368	1	1		
Calcium	No Objective	105	1	1		
Carbonate	No Objective	<1	1	1		
Chloride	250	16	1	1		
Conductivity	No Objective	883	1	1		
Hardness	800	381	1	1		
Magnesium	200	29	1	1		
рН	No Objective	7.60	1	1		
Sodium	300	51	1	1		
Sulphate	500	170	1	1		
Total dissolved						
Solids	1500	611	1	1		

All waterworks serving less than 5000 persons are required to submit water samples for WSA's General Chemical category once every two years if a ground water source and once per three months every second year if a surface water or blended surface/groundwater source. The General Chemical category includes analysis for alkalinity, bicarbonate, calcium, carbonate, chloride, conductivity, hardness (as CaCO<sub>3</sub>), magnesium, sodium, sulphate and total dissolved solids.

The last sample for General Chemical analysis was required in 2022 and submitted on June 20<sup>th</sup>, 2022. Sample results indicated that there were no exceedances of the provincial aesthetic objectives for the General Chemical category.

\*Objectives apply to certain characteristics of substances found in water for human consumptive or hygienic use. The presence of these substances will affect the acceptance of water by consumers and/or interfere with the practice of supplying good quality water. Compliance with drinking water aesthetic objectives is not mandatory as these objectives are in the range where they do not constitute a health hazard. The aesthetic objectives for several parameters (including hardness as CaCO<sub>3</sub>, magnesium, sodium and total dissolved solids) consider regional differences in drinking water sources and quality.
